

pamis Digital Passports

Our Digital Passport resource is an interactive e-book on the social, emotional and physical care needs of the person being cared for. Text, photos, videos and sound can be embedded in pages, which can be viewed on any computer or tablet device. Cloud storage now means that family carers can take ownership of who can access their Digital Passport and when, who can edit, add information and share with others. They can be used to facilitate assessments, including SDS, education, psychological and healthcare needs.

www.pamis.org.uk

**£8800
in house
for 12
attendees**

PAMIS Digital Passports are relevant to so many other groups of people with additional support needs; e.g. people with autism or dementia can be utilised in hospitals to improve quality of care and patient safety.

Our programme

PAMIS are offering a supported learning and development opportunity to embed the pamis digital passport into your service. We are passionate about ensuring that learning is embedded into practice and our unique approach will enable you to choose the most appropriate staff to take this tool into your organisation and PAMIS will then support your team to implement the tool with those who need a passport.

- ➔ Full day training session to introduce the facilitators to working with people with PMLD, the Digital Passport and the evidence base around this.
- ➔ Half day of virtual support every week for 3 weeks
- ➔ Visit from PAMIS facilitator visit to your workplace 1 day a month for 6 months to run a clinic to support skills and discuss problems
- ➔ Annual training update to update design, developments and research outcomes
- ➔ **This supervised programme, coupled with attendance an annual update, would give you a life long license to create and use PAMIS Digital Passports.**
